DOCUMENT HISTORY

Document Version	Date	Summary of Change
1.0	October 2024	Initial Document
2.0	April 2025	Revision
3.0	June 2025	Revision
4.0	August 2025	Revision

Purpose

The purpose of this document is to communicate the required Career and Technical Education (CTE) academic standards for the Digital Arts Program of Study. The academic standards in this document are theoretical and performance based. The standards contain content from multiple state departments of education, the College Board, and the Adobe Certified Professional and have been reviewed and vetted by members of the Maryland business and industry community.

In addition to academic standards, the Maryland State Department of Education (MSDE) has incorporated into this document Labor Market Information (LMI) definitions and explanations for the Program of Study; program aligned Industry Recognized Credentials; and Work-Based Learning resources and requirements by course level.

Sources of Standards

The following sources collectively support a progression of technical standards from foundational to advanced digital arts concepts in a high school context, preparing students for industry-aligned certifications like Adobe Premiere Pro Certified Professional and providing them with the necessary knowledge and skills for career readiness in arts, entertainment, and design fields.

1. **Adobe Certified Professional (ACP) Certification Standards**

- A. **Description:** Adobe Certified Professional certifications validate skills in Adobe Creative Cloud applications, including Photoshop, Illustrator, and InDesign. Each certification assesses proficiency in specific software functionalities, design principles, and project-based applications relevant to industry needs in digital media and graphic design.
- B. **Usage:** ACP certification standards inform the course objectives and outcomes, helping prepare students for Adobe exams in Photoshop, Illustrator, and InDesign. The standards ensure that students gain the technical skills and software expertise expected in professional graphic design and media production.
- C. **Source:** Adobe Certified Professional Certification Standards: <https://certiport.pearsonvue.com/Certifications/Adobe/ACP/Certify>

2. **Adobe Education Exchange**

- A. **Description:** Adobe Education Exchange is a comprehensive platform offering free resources, courses, and teaching materials for educators focused on Adobe products like Photoshop and Illustrator.
- B. **Usage:** The Adobe Education Exchange provides instructors with up-to-date curriculum guides and hands-on project ideas to introduce students to essential Adobe tools and concepts. This resource is valuable for meeting introductory-level competencies and aligns with preparing students for future Adobe certifications.
- C. **Source:** [Adobe Education Exchange](#)

3. **Adobe Classroom in a Book**

- A. **Description:** The "Classroom in a Book" series by Adobe Press includes official workbooks offering step-by-step lessons with files for hands-on practice.
- B. **Usage:** These books serve as structured resources for foundational skills equipping students with essential techniques and project-based applications as they start their certification journey.
- C. **Source:** Adobe Press - Classroom in a Book: <https://edex.adobe.com/teaching-resources/creative-cloud-digital-classroom-book-with-lesson-files-and-video-tutorials>

4. **National Core Arts Standards (NCAS) – Media Arts**

- A. **Description:** The NCAS offers a cohesive set of standards for arts education, including media arts, which encompasses disciplines like graphic design and visual media production. These standards outline essential artistic processes such as creating, presenting, responding, and connecting, tailored to various educational levels.
- B. **Usage:** NCAS standards provide an arts-based foundation for the courses, ensuring that students not only develop technical skills but also engage in creative processes that are essential to the field of graphic design. The standards promote critical thinking and artistic literacy in visual communication.

-
- C. **Source:** National Core Arts Standards – Media Arts: <https://www.nationalartsstandards.org/>
5. **Adobe Education Exchange for Professional Portfolio Development**
- A. **Description:** Adobe Education Exchange offers resources for portfolio development, client-based projects, and professional branding, including guidance on curating work samples and presenting digital portfolios.
- B. **Usage:** This platform supports capstone experiences by providing projects, tools, and resources that guide students through portfolio refinement, client interaction simulations, and professional presentation techniques.
- C. **Source:** [Adobe Education Exchange](#)
6. **Print[ED] – Print & Graphic Communications Association**
- A. **Description:** Print[ED] is a nationally recognized accreditation program for secondary and postsecondary graphic communications curricula. It offers industry-endorsed skill standards and assessments in areas such as Introduction to Graphic Communications, Graphic Design, Digital File Preparation & Output, and Digital Production Printing.
- B. **Usage:** Print[ED] competencies serve as a benchmark for structuring course content and ensuring alignment with industry expectations. Teachers use the competencies to guide curriculum development, focusing on print literacy—including substrates, color management, layout, digital file prep, and personalized printing concepts—within Adobe-based workflows. Programs can also pursue Print[ED] accreditation and provide students with credentials that reflect mastery of specific areas.
- C. **Source:** [PrintED Competencies – Print & Graphic Communications Association](#)
7. **Advance CTE - Modernized Career Clusters Framework**
- A. **Description:** The updated Advance CTE Career Clusters® Framework (October 2024) introduces a current structure for Arts, A/V Technology, and Communications, providing a modernized approach to career readiness and skill-building within the graphic communications field.
- B. **Usage:** This framework ensures that the Graphic Communications pathway aligns with current industry standards and career competencies, offering students a comprehensive view of industry expectations and skill development.

-

Course Descriptions

Course Level	Course Information	Description
Required Core: Course 1	Graphic Communications I SCED: Pending Grades: 9-12 Prerequisite: None Credit: 1	This introductory course introduces students to the foundational skills and concepts in graphic communications, covering design principles, visual composition, and the basics of industry-standard software such as Adobe Photoshop, Illustrator, and Premiere Pro.
Required Core: Course 2	Graphic Communications II SCED: Pending Grades: 10-12 Prerequisite: Graphic Communications I Credit: 1	Building on the foundations of Graphic Communications I, this course deepens students' skills in digital imaging, advanced photo editing, and vector-based design using Adobe Photoshop and Illustrator.
Optional Flex: Course 1	Graphic Communications III SCED: Pending Grades: 11-12 Prerequisite: Digital I and II Credit: 1	In Graphic Communications III, students advance their skills in layout design, prepress preparation, and publication techniques, with a focus on Adobe InDesign. They will create multi-page documents, manage complex typography, and use interactive elements for both digital and print media.
Optional Flex: Course 2	Career Connected Learning I SCED: Pending Grades: 11-12 Prerequisite: See Course Description Credits: 1-3	<u>Prerequisites:</u> - Alignment to the student's 6-Year Plan - Completion of: - Minimum two sequential courses in a CTE pathway, OR - Minimum two years of the same world language; OR - Minimum two sequential courses in a comprehensive arts program; OR - Inclusion in the IEP/504 transition plan with supporting documentation (as required) - Endorsement from an educator, mentor, employer, or career coach

Course Level	Course Information	Description
		4. No more than one course recovery credit in core subjects is needed by the student. This flexible, work-based learning course introduces students to real-world applications of classroom knowledge and technical skills through on-the-job experiences and reflective practices. Students engage in career exploration, skill development, and professional networking by participating in youth apprenticeships, registered apprenticeships, pre-apprenticeships, internships, capstone projects, or other approved career-connected opportunities. Variable credit (1–3) accommodates the required on-the-job training hours and related instruction. By integrating industry standards, employability skills, and personalized learning goals, Career Connected Learning I equips students to make informed career decisions, develop a professional portfolio, and build a strong foundation for success in postsecondary education, training, or the workforce.
Optional Flex: Course 3	Career Connected Learning II SCED: Pending Grades: 11-12 Prerequisite: Career Connected Learning I Credits: 1-3	Building on the foundational experiences of Career Connected Learning I, this advanced work-based learning course provides students with deeper on-the-job practice, leadership opportunities, and refined career exploration. Students continue to enhance their technical and professional skills, expanding their industry networks and aligning personal goals with evolving career interests. Variable credit (1–3) remains aligned with the required training hours and related instruction. Through elevated responsibilities and skill application, Career Connected Learning II prepares students to confidently transition into higher-level postsecondary programs, apprenticeships, or the workforce.

Dual Enrollment and Career Connected Learning Experiences Must be Aligned to the CTE Core.

Industry-Recognized Credentials and Career-Connected Learning

The *Blueprint for Maryland's Future* and the High School Level of a Registered Apprenticeship

The Maryland State Department of Education recognizes the high-school level of a Registered Apprenticeship (RA), defined as a State-approved Registered Apprenticeship begun during high school in which students complete at least 144 hours of related technical instruction and 250 hours of paid on-the-job training before graduation, with the remaining required apprenticeship hours completed post-graduation, as the gold standard of Career Connected Learning.

The CTE Committee of the Governor's Workforce Development Board, in alignment with federal apprenticeship standards, requires 144 hours of RTI for all high school RA participants, and the Apprenticeship Maryland Program (AMP) defines the minimum RTI as **one course credit equivalent**. This high-school-level Registered Apprenticeship is the preferred career-connected learning option for students to meet the Blueprint's goal that 45% of public high school graduates complete either the high-school level of a Registered Apprenticeship or another industry-recognized credential.

To the extent practicable, the greatest number of students should achieve this goal through participation in a high-school level Registered Apprenticeship, with schools ensuring these requirements are scheduled, completed, and documented for transcript and reporting purposes.

To the extent practicable, the greatest number of students should achieve this goal through the high-school level of a Registered Apprenticeship.

Career-Connected Learning Resources		
Course 1: Career Awareness	Course 2: Career Preparation	Flex Courses: Career-Connected Learning
- Industry Visits - Guest Speakers - Participation in Career and Technical Student Organizations - Postsecondary Visits – Program Specific Site Tours - Mock Interviews	- All of Career Awareness plus the following: - Job Shadow - Employer Mentoring	- Registered Apprenticeship - Internship - School-Based Enterprise - Employer-Directed Capstone

Industry-Recognized Credentials – The standards in this document are aligned to the following certifications:

By the end of Graphic Communications II: Adobe Certified Professional in Photoshop and/or Adobe Certified Professional in Illustrator

Optional Credentials (via the Flex Course options): Adobe Certified Professional in In-Design, Print[ED] certifications in: Intro to Graphic Communications, Graphic Design, and Digital File Preparation and Output

Labor Market Information: Definitions and Data

Labor market information (LMI) plays a crucial role in shaping Career and Technical Education (CTE) programs by providing insights into industry demands, employment trends, and skills gaps. This data helps education leaders assess the viability of existing programs and identify opportunities for new offerings. By aligning CTE programs with real-time labor market needs, schools can better prepare students for in-demand careers and ensure that resources are effectively used to support pathways that lead to high-quality, sustainable employment.

Standard Occupational Code (SOC) and Aligned Industry:

Indicator	Definition	Pathway Labor Market Data
High Wage¹	Those occupations that have a 25th percentile wage equal to or greater than the most recent MIT Living Wage Index for one adult in the state of Maryland, and/or leads to a position that pays at least the median hourly or annual wage for the DC-VA-MD-WV Metropolitan Statistical Area (MSA). <i>Note: A 25th percentile hourly wage of \$24.74 or greater is required to meet this definition.</i>	Standard Occupational Code: 27-1024: Graphic Designers Hourly Wage/Annual Salary: 25 th Percentile: \$28.34 / \$58,947.00 50 th Percentile: \$31.87 / \$66,290.00 75 th Percentile: \$39.32 / \$81,786.00
High Skill	Those occupations located within the DC-VA-MD-WV Metropolitan Statistical Area (MSA) with the following education or training requirements: completion of an apprenticeship program; completion of an industry-recognized certification or credential; associate's degree, bachelor's degree, or higher.	Typical Entry-Level Education: Graphic designers typically need a bachelor's degree in graphic design or a related fine arts field. People who have a bachelor's degree in another field may complete technical training in graphic design to meet most hiring qualifications.
In-Demand	Annual growth plus replacement, across all Maryland occupations, is <u>405</u> openings between 2024-2029.	Annual Openings 350

Lightcast Data Updated August 2025

¹ Living Wage Calculator: <https://livingwage.mit.edu/states/24>

Labor Market Information Data Source

Lightcast occupation employment data are based on final Lightcast industry data and final Lightcast staffing patterns. Wage estimates are based on Occupational Employment Statistics (QCEW and Non-QCEW Employees classes of worker) and the American Community Survey (Self-Employed and Extended Proprietors). Occupational wage estimates are also affected by county-level Lightcast earnings by industry. Foundational data for the state of Maryland is collected and reported by the Maryland Department of Labor.

Methodology for High Wage Calculations

To combine labor market data across multiple Standard Occupational Classifications (SOCs), a weighted average approach was used to ensure accurate representation of the marketplace. Median wages for each SOC were weighted based on their respective employment levels, reflecting the relative demand for each occupation. This method ensures that occupations with higher employment contribute proportionately to the overall wage calculation. Additionally, job openings from all relevant SOCs were summed to determine the total projected demand. For example, if Mechanical Engineers account for 67% of total employment and Electrical Engineers for 33%, their respective wages are weighted accordingly, and job openings are aggregated to provide a comprehensive view of labor market opportunities. This approach delivers a balanced and accurate representation of both wages and employment demand for the program.

Methodology for In-Demand Calculations

The baseline for annual job openings, taking into account new positions and replacement positions, was determined by taking the average of all annual job openings between 2024 and 2029 across all 797 career sectors at the 5-digit SOC code level. For the 2024-2029 period, average job openings (growth + replacement) is 405.

Course Standards: Graphic Communications I

1. GENERAL REQUIREMENTS. This course is recommended for students in Grades 9-12.

2. INTRODUCTION

- A. Career and Technical Education (CTE) instruction provides content aligned with challenging academic standards and relevant technical knowledge and skills for students to further their education and succeed in current or emerging professions.
- B. The Arts, Entertainment and design Career Cluster combines creative roles in visual and performing arts, film, journalism, fashion, interior design, and creative technologies. This Cluster focuses on creating, producing, and sharing artistic and design work across multiple platforms, aiming to entertain, inform, beautify, and inspire.
- C. The Graphic Communications program of study careers encompasses the creation and production of visually engaging digital content such as visual marketing, graphic design, augmented and virtual reality, web design, and user interfaces/user experiences. This program of study combines artistic talent and technology to produce interactive content, entertainment, commercial product and packaging design, and promotional materials.
- D. Graphic Communications I is an introductory course within the Arts, Entertainment, and Design Career Cluster, aimed at high school students exploring foundational skills in digital content creation and production. This course immerses students in the creative processes and technical skills necessary to produce visually engaging digital content across various platforms. Students will learn to conceptualize, design, and edit projects using industry-standard tools such as Adobe Premiere Pro, Photoshop, and Illustrator, building a portfolio of work that includes elements of visual marketing, graphic design, web design, and user interfaces.
- E. Students will participate in at least two Career-Connected Education and Work-Based Learning experiences in this course, which might include informational interviews or job shadowing relevant to the program of study.
- F. Students are encouraged to participate in extended learning experiences through aligned Career and Technical Student Organizations (CTSOs). CTSOs are a cocurricular requirement in the Carl D. Perkins Act, and alignment to CTSO activities is an expectation for CTE programs in the state of Maryland.

3. KNOWLEDGE AND SKILLS

- A. The student demonstrates the necessary skills for career development, maintenance of employability, and successful completion of course outcomes. The student is expected to:**
 - 1. Identify and demonstrate positive work behaviors that enhance employability and job advancement, such as regular attendance, promptness, proper attire, maintenance of a clean and safe work environment, and pride in work.
 - 2. Demonstrate positive personal qualities such as flexibility, open-mindedness, initiative, active listening, and a willingness to learn.
 - 3. Employ effective reading, writing, and technical documentation skills.
 - 4. Solve problems using critical thinking techniques and structured troubleshooting methodologies.
 - 5. Demonstrate leadership skills and collaborate effectively as a team member.
 - 6. Implement safety procedures, including proper use of software and following privacy guidelines.

7. Exhibit an understanding of legal and ethical responsibilities in the Graphic Communications field, following data privacy laws and best practices for security.
8. Demonstrate time-management skills and the ability to prioritize tasks in a technical setting.

B. The student identifies various career pathways in the Graphic Communications field. The student is expected to:

1. Develop a career plan that includes the necessary education, certifications, job skills, and experience for specific roles in Graphic Communications.
2. Create a professional resume and portfolio that reflect skills, projects, certifications, and recommendations.
3. Demonstrate effective interview skills for roles in media and graphic communications.

C. The student develops technology and digital literacy skills. The student is expected to:

1. Use industry-standard design software such as Adobe Photoshop, Illustrator, Premiere Pro, and (as available) After Effects to create, edit, and publish digital, motion, and print-ready visual content..
2. Apply effective file management techniques, including organizing project files, maintaining version control, and adhering to proper naming conventions to enhance workflow and collaboration.
3. Demonstrate proficiency in using digital tools for prepress preparation, including color management, resolution adjustments, and setting up files for print and digital distribution.
4. Evaluate design projects through the use of critical thinking and problem-solving skills, utilizing feedback, industry standards, and design principles to refine and improve work.
5. Develop a professional online and print portfolio using digital platforms and tools to showcase technical skills, creativity, and industry-aligned competencies for career readiness.

D. The student develops introductory motion-graphics and video-editing skills using Adobe Premiere Pro and/or Adobe After Effects (or comparable software). The student is expected to:

1. Import and organize media (stills, vectors, video, audio) and manage timelines/sequences for short pieces (5–15 seconds) intended for social and web delivery.
2. Apply core animation concepts—keyframes, position/scale/opacity, easing—in simple kinetic-type or logo stings.
3. Explain and apply common frame rates (12, 15, 24, 29.97, 30 fps) and demonstrate animating “on 1s” and “on 2s” for timing and readability.
4. Use selections, masks, and track mattes to composite type/graphics over background plates or footage.
5. Export looped animated GIFs and H.264 MP4s with web-appropriate settings (resolution, bitrate) and document choices that balance quality and file size.
6. Credit assets appropriately and follow file-naming/version-control conventions consistent with program workflows.

E. The student integrates core academic skills into Graphic Communications practices. The student is expected to:

1. Integrate English language arts skills, such as writing informative texts, crafting project descriptions, and delivering oral presentations, to articulate design concepts and processes effectively.
2. Apply mathematical principles, including scaling, ratios, geometry, and proportional reasoning, to accurately size, align, and format digital and print design elements.
3. Analyze design projects using critical thinking skills, evaluating visual components for effectiveness, audience engagement, and adherence to industry standards.
4. Incorporate scientific concepts, such as color theory and light behavior, to manage color models, gradients, and visual effects in digital and print media.

F. The student demonstrates foundational skills in graphic communications. The student is expected to:

1. Explain the elements and principles of design and their role in visual composition.
2. Identify and describe various career pathways in graphic design and printing, including their associated skills and competencies.

G. The student demonstrates the necessary skills to use Adobe Photoshop at an introductory level. The student is expected to:

1. Demonstrate basic photo editing techniques, including cropping, resizing, and color correction.
2. Use layers and layer masks to manage image composition.
3. Apply image enhancement tools such as the clone stamp, healing brush, and filters to adjust images for clarity and emphasis.

H. The student explores vector-based design using Adobe Illustrator tools. The student is expected to:

1. Create simple vector graphics, including logos and icons, using basic shape and path tools.
2. Demonstrate the use of colors, gradients, and fills to enhance vector images.
3. Use text tools and formatting to incorporate typography into designs.

I. The student develops an understanding of the printing process and its applications. The student is expected to:

1. Explain the fundamentals of print design, including color models (RGB vs. CMYK) and resolution requirements for print versus digital media.
2. Identify common printing methods and equipment used in the graphic communications industry.
3. Apply basic concepts of layout and composition relevant to print media, including margins, bleed, and safe zones.

J. The student demonstrates knowledge of substrates and their impact on print quality. The student is expected to:

1. Identify various types of substrates (e.g., paper types, weights, coatings) used in print production.
2. Describe how substrate characteristics influence ink absorption, color reproduction, and durability.
3. Match appropriate substrates to different printing applications based on job specifications.

Course Standards: Graphic Communications II

1. **GENERAL REQUIREMENTS.** This course is recommended for students in Grades 10-12.
2. **INTRODUCTION**
 - A. Career and Technical Education (CTE) instruction provides content aligned with challenging academic standards and relevant technical knowledge and skills for students to further their education and succeed in current or emerging professions.
 - B. The Arts, Entertainment and Design Career Cluster combines creative roles in visual and performing arts, film, journalism, fashion, interior design, and creative technologies. This Cluster focuses on creating, producing, and sharing artistic and design work across multiple platforms, aiming to entertain, inform, beautify, and inspire.
 - C. The Graphic Communications program of study careers encompasses the creation and production of visually engaging digital content such as visual marketing, graphic design, augmented and virtual reality, web design, and user interfaces/user experiences. This program of study combines artistic talent and technology to produce interactive content, entertainment, commercial product and packaging design, and promotional materials.
 - D. Graphic Communications II builds on the foundational skills acquired in Graphic Communications I, advancing students' abilities in digital content creation, design, and multimedia production. Positioned within the Arts, Entertainment, and Design Career Cluster, this course enables students to deepen their expertise in producing visually dynamic content across various media platforms, with an emphasis on creative technologies and interactive design. Students engage in more complex projects involving graphic design, motion graphics, augmented reality, and user experience/user interface (UX/UI) design, gaining insights into professional workflows and creative problem-solving.
 - E. Students will participate in at least two Career-Connected Education and Work-Based Learning experiences in this course, which might include informational interviews or job shadowing relevant to the program of study.
 - F. Students are encouraged to participate in extended learning experiences through aligned Career and Technical Student Organizations (CTSOs). CTSOs are a cocurricular requirement in the Carl D. Perkins Act, and alignment to CTSO activities is an expectation for CTE programs in the state of Maryland.
3. **KNOWLEDGE AND SKILLS**
 - A. **The student demonstrates the necessary skills for career development, maintenance of employability, and successful completion of course outcomes. The student is expected to:**
 1. Identify and demonstrate positive work behaviors that enhance employability and job advancement, such as regular attendance, promptness, proper attire, maintenance of a clean and safe work environment, and pride in work.
 2. Demonstrate positive personal qualities such as flexibility, open-mindedness, initiative, active listening, and a willingness to learn.
 3. Employ effective reading, writing, and technical documentation skills.
 4. Solve problems using critical thinking techniques and structured troubleshooting methodologies.
 5. Demonstrate leadership skills and collaborate effectively as a team member.
 6. Implement safety procedures, including proper use of software and following privacy guidelines.

7. Exhibit an understanding of legal and ethical responsibilities in the Graphic Communications field, following data privacy laws and best practices for security.
8. Demonstrate time-management skills and the ability to prioritize tasks in a technical setting.

B. The student identifies various career pathways in the Graphic Communications field. The student is expected to:

1. Develop a career plan that includes the necessary education, certifications, job skills, and experience for specific roles in Graphic Communications.
2. Create a professional resume and portfolio that reflect skills, projects, certifications, and recommendations.
3. Demonstrate effective interview skills for roles in media and graphic communications.

C. The student develops technology and digital literacy skills. The student is expected to:

1. Use industry-standard design software such as Adobe Photoshop, Illustrator, and InDesign to create, edit, and publish digital and print-ready visual content.
2. Apply effective file management techniques, including organizing project files, maintaining version control, and adhering to proper naming conventions to enhance workflow and collaboration.
3. Demonstrate proficiency in using digital tools for prepress preparation, including color management, resolution adjustments, and setting up files for print and digital distribution.
4. Create interactive and multimedia projects by integrating hyperlinks, navigation elements, and multimedia components to design user-focused digital publications.
5. Evaluate design projects through the use of critical thinking and problem-solving skills, utilizing feedback, industry standards, and design principles to refine and improve work.
6. Develop a professional online and print portfolio using digital platforms and tools to showcase technical skills, creativity, and industry-aligned competencies for career readiness

D. The student integrates core academic skills into Graphic Communications practices. The student is expected to:

1. Integrate English language arts skills, such as writing informative texts, crafting project descriptions, and delivering oral presentations, to articulate design concepts and processes effectively.
2. Apply mathematical principles, including scaling, ratios, geometry, and proportional reasoning, to accurately size, align, and format digital and print design elements.
3. Analyze design projects using critical thinking skills, evaluating visual components for effectiveness, audience engagement, and adherence to industry standards.
4. Incorporate scientific concepts, such as color theory and light behavior, to manage color models, gradients, and visual effects in digital and print media.

E. The student demonstrates advanced skills in graphic design and digital imaging. The student is expected to:

1. Apply advanced photo editing and manipulation techniques in Adobe Photoshop, such as blending modes, advanced selections, and non-destructive editing.
2. Create complex compositions using multiple layers, masks, and adjustment layers to enhance image quality and visual appeal.

3. Use content-aware fill and vector shape layers to retouch images and create scalable design elements.
4. Use vector graphics for advanced design work in Adobe Illustrator, applying skills such as pathfinding, custom shapes, and typography, including creating artwork with brushes, pattern fills, blends, and gradient meshes to demonstrate versatile vector techniques.

F. The student applies intermediate motion-graphics techniques for brand and publication contexts. The student is expected to:

1. Create branded lower-thirds, bumpers, or short title sequences that integrate vector assets from Illustrator and raster assets from Photoshop.
2. Use animation curves, temporal/spatial interpolation, and pre-compositions/nested sequences to organize complex motion.
3. Prepare deliverables for multi-platform distribution (web, social, kiosks), applying safe-area, captions/graphics legibility, and aspect-ratio adaptations (16:9, 9:16, 1:1).
4. Export and QC assets (alpha-channeled MOV/PNG sequences, MP4, GIF) and document render presets for reuse.

G. The student prepares for industry-recognized certification in Adobe Photoshop or Illustrator. The student is expected to:

1. Complete projects that replicate real-world graphic design tasks, preparing for Certiport's Adobe Certified Professional exams.
2. Demonstrate the ability to export and prepare files for both digital and print media, understanding resolution, color models, and file types.
3. Develop a portfolio that showcases technical proficiency and creativity in Adobe Photoshop or Illustrator, with projects demonstrating professional-level quality.

H. The student develops proficiency in digital and print design principles. The student is expected to:

1. Apply principles of visual hierarchy, balance, and alignment in multi-page documents and single-page designs.
2. Explore layout design for print media, including magazine spreads, posters, and brochures, utilizing design grids and master pages.
3. Use color theory in design projects, including monochromatic, analogous, and complementary color schemes, to enhance visual impact.
4. Analyze and critique design works, applying knowledge of design principles, audience considerations, and branding consistency.

I. The student demonstrates knowledge of printing processes and prepress preparation. The student is expected to:

1. Prepare documents for print by setting up bleeds, margins, and crop marks and ensuring color accuracy through CMYK color management.
2. Identify and troubleshoot common printing issues, such as color shift, bleed errors, and resolution discrepancies.
3. Understand and apply knowledge of various printing methods, including digital, offset, and screen printing, and identify their appropriate uses.

J. The student demonstrates knowledge of binding and finishing techniques. The student is expected to:

1. Describe the typical workflow from design to output, including file creation, proofing, and prepress review.
2. Prepare digital files using correct resolution, bleeds, margins, and CMYK color settings for print-readiness.
3. Evaluate PDF exports for compatibility with printers or clients, ensuring fonts, images, and layout integrity are preserved.
4. Export print-ready files using industry-standard PDF/X presets and perform a basic pre-flight check that verifies image resolution, embedded fonts, color mode, and bleed settings.

K. The student demonstrates knowledge of finishing and binding concepts for printed materials. The student is expected to:

1. Identify common finishing techniques (e.g., trimming, folding, scoring) and their impact on final output.
2. Research different binding styles (e.g., saddle-stitch, spiral) and describe their practical and aesthetic applications.
3. Plan project layouts with margins and folds that accommodate trimming and binding needs.

Course Standards: Graphic Communications III

1. **GENERAL REQUIREMENTS.** This course is recommended for students in Grades 10-12.
2. **INTRODUCTION**
 - A. Career and Technical Education (CTE) instruction provides content aligned with challenging academic standards and relevant technical knowledge and skills for students to further their education and succeed in current or emerging professions.
 - B. The Arts, Entertainment and Design Career Cluster combines creative roles in visual and performing arts, film, journalism, fashion, interior design, and creative technologies. This Cluster focuses on creating, producing, and sharing artistic and design work across multiple platforms, aiming to entertain, inform, beautify, and inspire.
 - C. The Graphic Communications program of study careers encompasses the creation and production of visually engaging digital content such as visual marketing, graphic design, augmented and virtual reality, web design, and user interfaces/user experiences. This program of study combines artistic talent and technology to produce interactive content, entertainment, commercial product and packaging design, and promotional materials.
 - D. Graphic Communications III deepens students' expertise in advanced creative and technical skills, focusing on post-production, motion graphics, and complex visual effects. Students explore techniques in compositing, advanced color correction, and 3D effects using tools like Adobe After Effects and Avid Media Composer.
 - E. Students will participate in at least two Career-Connected Education and Work-Based Learning experiences in this course, which might include informational interviews or job shadowing relevant to the program of study.
 - F. Students are encouraged to participate in extended learning experiences through aligned Career and Technical Student Organizations (CTSOs). CTOSs are a cocurricular requirement in the Carl D. Perkins Act, and alignment to CTSO activities is an expectation for CTE programs in the state of Maryland.
3. **KNOWLEDGE AND SKILLS**
 - A. **The student demonstrates the necessary skills for career development, maintenance of employability, and successful completion of course outcomes. The student is expected to:**
 1. Identify and demonstrate positive work behaviors that enhance employability and job advancement, such as regular attendance, promptness, proper attire, maintenance of a clean and safe work environment, and pride in work.
 2. Demonstrate positive personal qualities such as flexibility, open-mindedness, initiative, active listening, and a willingness to learn.
 3. Employ effective reading, writing, and technical documentation skills.
 4. Solve problems using critical thinking techniques and structured troubleshooting methodologies.
 5. Demonstrate leadership skills and collaborate effectively as a team member.
 6. Implement safety procedures, including proper use of software and following privacy guidelines.
 7. Exhibit an understanding of legal and ethical responsibilities in the Graphic Communications field, following data privacy laws and best practices for security.
 8. Demonstrate time-management skills and the ability to prioritize tasks in a technical setting.

B. The student identifies various career pathways in the Graphic Communications field. The student is expected to:

1. Develop a career plan that includes the necessary education, certifications, job skills, and experience for specific roles in Graphic Communications.
2. Create a professional resume and portfolio showcasing skills and projects that meet certification requirements, emphasizing layout and design accuracy.
3. Demonstrate effective interview skills for roles in media and graphic communications.

C. The student develops technology and digital literacy skills. The student is expected to:

1. Use industry-standard design software such as Adobe Photoshop, Illustrator, and InDesign to create, edit, and publish digital and print-ready visual content.
2. Apply effective file management techniques, including organizing project files, maintaining version control, and adhering to proper naming conventions to enhance workflow and collaboration.
3. Demonstrate proficiency in using digital tools for prepress preparation, including color management, resolution adjustments, and setting up files for print and digital distribution.
4. Create interactive and multimedia projects by integrating hyperlinks, navigation elements, and multimedia components to design user-focused digital publications.
5. Evaluate design projects through the use of critical thinking and problem-solving skills, utilizing feedback, industry standards, and design principles to refine and improve work.
6. Develop a professional online and print portfolio using digital platforms and tools to showcase technical skills, creativity, and industry-aligned competencies for career readiness

D. The student integrates core academic skills into Graphic Communications practices. The student is expected to:

1. Integrate English language arts skills, such as writing informative texts, crafting project descriptions, and delivering oral presentations, to articulate design concepts and processes effectively.
2. Apply mathematical principles, including scaling, ratios, geometry, and proportional reasoning, to accurately size, align, and format digital and print design elements.
3. Analyze design projects using critical thinking skills, evaluating visual components for effectiveness, audience engagement, and adherence to industry standards.
4. Incorporate scientific concepts, such as color theory and light behavior, to manage color models, gradients, and visual effects in digital and print media.

E. The student demonstrates advanced skills in layout design and publication. The student is expected to:

1. Create complex, multi-page layouts using Adobe InDesign, including setting up master pages, grids, and custom style sheets.
2. Incorporate typography effectively, utilizing advanced text formatting, kerning, and leading to enhance readability and aesthetic appeal.
3. Use interactive elements in layouts, such as hyperlinks, buttons, and multimedia, to design content for both digital and print media.
4. Analyze and evaluate visual media, using knowledge of branding, audience engagement, and user experience.

F. The student demonstrates foundational motion-design skills using Adobe After Effects (or comparable software).

1. Explain core principles of motion design—including timing, easing, anticipation, follow-through, and kinetic typography—and compare them with static design principles.
2. Create short motion-graphics sequences that incorporate text, shape layers, and keyframes to enhance visual storytelling.
3. Apply basic compositing techniques (masking, track mattes, alpha channels) to integrate animated elements with still graphics or video footage.
4. Export motion graphics in appropriate file formats (e.g., H.264 MP4, animated GIF, Lottie JSON) optimized for web, social-media, and broadcast use, documenting settings that balance quality and file size.

G. The student prepares for industry-recognized certification in Adobe InDesign. The student is expected to:

1. Complete projects that reflect industry standards for Adobe Certified Professional certification in InDesign, including real-world applications like brochures, reports, and digital publications.
2. Demonstrate proficiency in exporting files for various formats, understanding preflight checks, and ensuring print-ready quality.

H. The student explores advanced print production techniques and prepress procedures. The student is expected to:

1. Apply advanced color management techniques to ensure color consistency across digital and print formats.
2. Use preflight tools to identify and correct file errors, such as font issues, bleed inconsistencies, and resolution problems before printing.
3. Understand the roles and processes within print production environments, including proofing, plate preparation, and quality control.

I. The student begins preparation for a capstone experience by developing a professional portfolio. The student is expected to:

1. Select and refine work samples to build a cohesive portfolio that demonstrates technical skills and creativity in layout design, typography, and digital media.
2. Incorporate feedback from peers and mentors to improve portfolio quality and presentation.
3. Create project summaries and reflective statements for each piece in the portfolio, articulating design decisions and technical methods used.

J. The student applies quality control concepts in digital design and prepress processes. The student is expected to:

1. Conduct a digital preflight check on a layout to verify resolution, fonts, color modes, and bleed settings.
2. Identify common design errors that affect print output, such as low-resolution images or RGB color in CMYK files.
3. Use digital proofing methods (soft proofing and PDF review) to ensure design accuracy before final output.
